

Summary

"...The book takes the reader on a water journey through time and across the world's continents. Along the way it explains the past and present ways in which different cultures around the world, both traditional and modern, view and manage water in response to the distinct environment they inhabit. As beliefs and values are at the heart of any culture, it also highlights the views of the main world religions on water and its use. A better understanding of cultural water beliefs and practices may lead to new concepts for future sustainable water management – from flood management to water supply, sanitation and irrigation management."
